Computational Nanotoxicology Agnieszka Gajewicz 2019-11-13 The development of computational methods that support human health and environmental risk assessment of engineered nanomaterials (ENMs) has attracted great interest because the application of these methods enables us to fill existing experimental data gaps. However, considering the high degree of complexity and multifunctionality of ENMs, computational methods originally developed for regular chemicals cannot always be applied explicitly in nanotoxicology. This book discusses the current state of the art and future needs in the development of computational modeling techniques for nanotoxicology. It focuses on (i) computational chemistry (quantum mechanics, semi-empirical methods, density functional theory, molecular mechanics, molecular dynamics), (ii) nanochemoinformatic methods (quantitative structure-activity relationship modeling, grouping, read-across), and (iii) nanobioinformatic methods (genomics, transcriptomics, proteomics, metabolomics). It reviews methods of calculating molecular descriptors sufficient to characterize the structure of nanoparticles, specifies recent trends in the validation of computational methods, and discusses ways to cope with the uncertainty of predictions. In addition, it highlights the status quo and further challenges in the application of computational methods in regulation (e.g., REACH, OECD) and in industry for product development and optimization and the future directions for increasing acceptance of computational modeling for nanotoxicology.

Cognitive Integration R. Menary 2007-10-24 This book argues that thinking is bounded by neither the brain nor the skin of an organism. Cognitive systems function through integration of neural and bodily functions with the functions of representational vehicles. The integrationist position offers a fresh contribution to the emerging embodied and embedded approach to the study of mind.

The chapters in this book cover topics such as mitochondrial proteomics, fluorescence lifetime imaging, respirometry and mitophagy, as well as optical approaches based on the use of genetically engineered fluorescent sensors for monitoring synaptic ATP and axonal ROS generation, mitochondrial Ca2+ cycling and pH changes, and mitochondrial dynamics and axonal trafficking in live neurons. Each chapter also discusses difficulties, tips, tricks, and precautions to take. Neuromethods series style chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory. Cutting-edge and comprehensive, Techniques to Investigate Mitochondrial Function in Neurons is a valuable and useful resource for a broad range of investigators interested in the function of neuronal mitochondria in health and disease states.

A Little Princess Illustrated Frances Hodgson Burnett 2021-04-06 A Little Princess is a children's novel by Frances Hodgson Burnett, first published as a book in 1905. It is an expanded version of the short story "Sara Crewe: or, What Happened at Miss Minchin's", which was serialized in St. Nicholas Magazine from December 1887, and published in book form in 1888. According to Burnett, after she composed the 1902 play A Little Un-fairy Princess based on that story, her publisher asked that she expand the story as a novel with "the things and people that had been left out before".[4] The novel was published by Charles Scribner's Sons (also publisher of St. Nicholas) with illustrations by Ethel Franklin Betts and the full title A Little Princess: Being the Whole Story of Sara Crewe Now Being Told for the First Time

The Software Craftsman Sandro Mancuso 2014-12-12 Be a Better Developer and Deliver Better Code Despite advanced tools and methodologies, software projects continue to fail. Why? Too many organizations still view software development as just another production line. Too many developers feel that way, too—and they behave accordingly. In The Software Craftsman: Professionalism, Pragmatism, Pride, Sandro Mancuso offers a better and more fulfilling path. If you want to develop software with pride and professionalism; love what you do and do it with excellence; and build a career with autonomy, mastery, and purpose, it starts with the recognition that you are a craftsman. Once you embrace this powerful mindset, you can achieve unprecedented levels of technical excellence and customer satisfaction. Mancuso helped found the world's largest organization of software craftsmen; now, he shares what he's learned through inspiring examples and pragmatic advice you can use in your company, your projects, and your career. You will learn Why agile processes aren't enough and why craftsmanship is crucial to making them work How craftsmanship helps you build software right and helps clients in ways that go beyond code How and when to say "No" and how to provide creative alternatives when you do Why bad code happens to good developers and how to stop creating and justifying it How to make working with legacy code less painful and more productive How to be pragmatic—not dogmatic—about your practices and tools How to lead software craftsmen and attract them to your organization What to avoid when advertising positions, interviewing candidates, and hiring developers How developers and their managers can create a true culture of learning How to drive true technical change and overcome deep patterns of skepticism Sandro Mancuso has coded for startups, software houses, product companies, international consultancies, and investment banks. In October 2013, he cofounded Codurance, a consultancy based on Software Craftsmanship principles and values. His involvement with Software Craftsmanship began in 2010, when he founded the London Software Craftsmanship Community (LSCC), now the world's largest and most active Software Craftsmanship community, with more than two thousand craftsmen. For the past four years, he has inspired and helped developers to organize Software Craftsmanship communities throughout Europe, the United States, and the rest of the world.

A Social Strategy Mikolaj Jan Piskorski 2016-02-23 What people get out of social media—and how businesses can get more out of it Almost no one had heard of social media a decade ago, but today websites such as Facebook, Twitter, and LinkedIn have more than 1 billion users and account for almost 25 percent of Internet use. Practically overnight, social media seems indispensable to our lives—from friendship and dating to news and business. What makes social media so different from traditional media? Answering that question is the key to making social media work for any business, argues Miko?aj Piskorski, one of the world's leading experts on the business of social media. In A Social Strategy, he provides the most convincing answer yet, one backed by original research, data, and case studies from companies such as Nike and American Express. Drawing on his analysis of proprietary data from social media sites, Piskorski argues that the secret of successful ones is that they allow people to fulfill social needs that either can't be met offline or can be met only at much greater cost. This insight provides the key to how companies can leverage social platforms to create a sustainable competitive advantage. Companies need to help people interact with each other before they will promote products to their friends or help companies in other ways. Done right, a company's social media should benefit customers and the firm. Piskorski calls this "a social strategy," and he describes how companies such as Yelp and Zynga have done it. Groundbreaking and important, A Social Strategy provides not only a story- and data-driven explanation for the explosion of social media but also an invaluable, concrete road map for any company that wants to tap the marketing potential of this remarkable phenomenon.

Decode Personality for Organisational Success - A Cosmo-Psycho Tool Vipul Saxena 2020-02-10 Historically, the tenure of most CEOs, business heads and key functional leaders of the best organisations globally have been short-lived despite these leaders being highly talented with credible academic qualifications, high caliber & proven track records. One common factor that came to light was that they failed at a critical point of business decision. The book has been crafted using well-researched & scientifically-analysed data and successfully introduces a new term in the personality spectrum, i.e., Precast Personality. The book argues that it is the Precast Personality of incumbent that plays a predominant role over Apparent Personality acquired through high profile academic/management courses to suit the assigned role resulting into the failure at "a critical point of business decision". The book blends Occult Sciences and Psychology to conceptualize & derive a Theory for decoding Personality to achieve Organisational Success. The book ultimately leads to design a Cosmo-Psycho Tool to decode Personality of incumbent. It effectively answers the following questions: a. What is Precast Personality? b. Do occult sciences have scientific bearing? c. Is there a relationship between occult sciences and new age sciences?

The Social Construction of Difference and Inequality: Race, Class, Gender and Sexuality Tracy E. Ore 2006 This anthology examines the social construction of race, class, gender, and sexuality and the institutional bases for these relations. While other texts discuss various forms of stratification and the impact of these on members of marginalized groups, Ore provides a thorough discussion of how such systems of stratification are formed and perpetuated and how forms of stratification are interconnected. The anthology supplies sufficient pedagogical tools to aid the student in understanding how the material relates to her/his own life and how her/his own attitudes, actions, and perspectives may serve to perpetuate a stratified system.

Minor Mlabri Jørgen Rischel 1995 The language described in this monograph is spoken by a small hilltribe in Northern Indochina. Its existence has attracted considerable attention because of the legendary and intriguing primitiveness of the Mlabri or 'Spirits of the Yellow Leaves', as they are traditionally called, but reliable information about the cultural heritage and particularly the language is sparse. This is true in particular of an ethnic subgroup whose culture and language are now close to extinction: the group is referred to as the 'Minor Mlabri'. This monograph is based on field notes from 1988 and later years in which the author visited the 'Minor-Mlabri'. The Mlabri are traditionally hunter-gatherers and seem to have been so for a long time. Until recently this was more or less the lifestyle of the small group under study here. They now associate with Hmongs in remote villages because they were for several years trapped in the war zone between Laos and Thailand and the few survivors of the 'Minor-Mlabri' had to settle down in safer environments. Deforestation has made it increasingly difficult for them to live their traditional life in the area where they belong. Up to now, the Mlabri language (in all its varieties) has been unknown.

Thermal Cracking of Massive Concrete Structures Eduardo M.R. Fairbairn 2018-05-23 This book provides a State of the Art Report (STAR) produced by RILEM Technical Committee 254-CMS 'Thermal Cracking of Mas-sive Concrete Structures'. Several recent developments related to the old problem of understanding/predicting stresses originated from the evolution of the hydration of concrete are at the origin of the creation this technical committee. Having identified a lack in the organization of up-to-date scientific and technological knowledge about cracking induced by hydration heat effects, this STAR aims to provide both practitioners and scientists with a deep integrated overview of consolidated knowledge, together with recent developments on this subject.

Ada 95 David A. Wheeler 2012-12-06 Lovelace provides an introduction to Ada 95, one of the most widely used programming languages in the world. Although the reader is assumed to have a basic understanding of programming, no prior exposure to Ada is assumed and all the basics of the language are covered. The book comprises eighteen chapters each of which is composed of short sections designed to cover a small number of key concept and to provide a test question to check the reader's understanding of the concepts covered. Each chapter then concludes with a small quiz to help ensure that the reader has grasped the principles covered in the chapter. One of Ada 95's new features, its object-oriented facilities, is covered in depth, and all of the essential features of Ada programming are covered thoroughly. In Ada 95 significant enhancements were also added to Ada's ability to interface with other programming languages (such as C, Fortran, and Cobol) and these are covered in one chapter. As a result both students and professional programmers learning Ada for the first time will welcome this new text.

Competing in a Flat World Victor K. Fung 2007-09-12 "This is essential reading for anyone seeking to compete–and succeed–in the fl at world." –John Hagel, Chairman of Deloitte Center of Innovation "Competing in a Flat World provides an extraordinary glimpse into a new kind of organizational architecture, one built around the notion of orchestrating resources you don't control and doing so in a way that builds both trust and agility. This architecture may well turn out to be the dominant model of the firm for the 21st century. This book is a must read for anyone who wants to compete in a flat world. Every chapter details new and powerful ideas." –John Seely Brown, Former Chief Scientist of Xerox Corporation and coauthor of The Only Sustainable Edge "We are led by unstoppable economic forces to connect our resources to form smart networks, either wired or unwired. The authors bring forward the notion of 'network orchestration,' an almost one-size-fits-all strategy for organizations to survive and excel in an ever-flattening world." –John Chen, Sybase Chairman, CEO and President In the "flat world," everything changes…above all, what it takes to run a winning company. Success is less about what the company can do itself and more about what it can connect to. Find out how it's done, from the company that pioneered "flat world" success, Li & Fung, which produces more than $8 billion in garments and other goods for the world's top brands and retailers–without owning a single factory. Victor and William Fung and Jerry Wind, author of the best-selling The Power of Impossible Thinking, reveal how they've replaced "old-fashioned" infrastructure and huge employee bases with a fluid, ever-changing network that can design, manufacture, and deliver almost anything, anywhere. The key to success in this world is a set of principles for "network orchestration," described for the first time in this book. They examine how these principles can be applied in manufacturing, services and other industries. They show how to build and orchestrate your own world-class global network. * Compete "network vs. network"–and win! * Create a "big-small" company that combines scale and agility * Forge loose-tight relationships with suppliers * Balance control with empowerment, stability with renewal * Manage the "bumps" in the flat world–from conflicts to terrorism Visit the authors' website: www.competinginaflatworld.net
