Waltzing Through Europe: Attitudes towards Couple Dances in the Long Nineteenth-Century Egil Bakka

2020-09-10 From 'folk devils' to ballroom dancers, *Waltzing Through Europe* explores the changing reception of fashionable couple dances in Europe from the eighteenth century onwards. A refreshing intervention in dance studies, this book brings together elements of historiography, cultural memory, folklore, and dance across comparatively narrow but markedly heterogeneous localities. Rooted in investigations of often newly discovered primary sources, the essays afford many opportunities to compare sociocultural and political reactions to the arrival and practice of popular rotating couple dances, such as the Waltz and the Polka. Leading contributors provide a transnational and affective lens onto strikingly diverse topics, ranging from the evolution of romantic couple dances in Croatia, and Strauss's visits to Hamburg and Altona in the 1830s, to dance as a tool of cultural preservation and expression in twentieth-century Finland. *Waltzing Through Europe* creates openings for fresh collaborations in dance historiography and cultural history across fields and genres. It is essential reading for researchers of dance in central and northern Europe, while also appealing to the general reader who wants to learn more about the vibrant histories of these familiar dance forms.

A Global Radical Waterfront Holger Weiss 2021 "This volume investigates the ambition of the Red International of Labour Unions to radicalize the global waterfront during the interwar period. The main vehicle was the International Propaganda Committee of Transport Workers, replaced in 1930 by the International of Seamen and Harbour Workers as well as their agitation and propaganda centres, the International Harbour Bureaus and the International Seamen's Clubs. The investigation scrutinizes their solidarity campaigns in support of local and national strikes as well as on their agitation against discrimination, segregation and racism within the unions, their demands to organize non-white maritime transport workers, and their calls for

engagement in anti-fascist, anti-war and anti-imperialist actions"--

Burn Herman Pontzer 2021-03-02 'Pontzer's findings have huge implications for our attitudes to exercise, diet and public health' Mark Webster, Sunday Times A myth-busting tour of the body's hidden foundations from a pioneering evolutionary biologist 'Public health strategies stubbornly cling to the simplistic armchair engineer's view of metabolism, hurting efforts to combat obesity, diabetes, heart disease, cancer, and the other diseases that are most likely to kill us' Herman Pontzer's ground-breaking research has revealed how, contrary to received wisdom, exercise does not increase our metabolism. Instead, we burn calories within a very narrow range: nearly 3,000 calories per day, no matter our activity level. In this book, he draws on twenty years of cutting-edge science to take a closer look at what happens to the energy we consume. *Burn* explores the ways in which metabolism controls every aspect of our health - from fertility to immune function - and reveals the truth about the dynamic system that sustains us. Filled with facts and memorable anecdotes, this book will change the way you think about food, exercise and what really matters for your health.

Social Innovations in the Urban Context Taco Brandsen 2016-04-05 This book addresses the practice of social innovation, which is currently very much in the public eye. New ideas and approaches are needed to tackle the severe and wicked problems with which contemporary societies are struggling. Especially in times of economic crisis, social innovation is regarded as one of the crucial elements needed to move forward. Our knowledge of its dynamics has significantly progressed, thanks to an abundance of studies on social innovation both general and sector-specific. However, despite the valuable research conducted over the past years, the systematic analysis of social innovation is still contested and incomplete. The questions asked in the book will be the following: 1. What is the nature of social innovations? 2. What patterns can be identified in social innovations emerging at the local level? 3. How is the emergence and spread of social innovations related to urban governance? More precisely, which conditions and arrangements facilitate and hinder social innovation? We explore these questions using different types of data and methods, and studying different

contexts. In particular, we focus on innovations that aim at solving problems of the young unemployed, single parents and migrants. This analysis is based on original research carried out in the period 2010-2013 in the framework of a European project with a specific empirical research strategy. Research was carried out in 20 cities in 10 different European countries.

Putin Redux Richard Sakwa 2014-05-23 This book builds on the strengths of the previous volumes by the same author to provide the most detailed and nuanced account of the man, his politics and his profound influence on Russian politics, foreign policy and society. However, this is not a new edition of the earlier books but is an entirely new work. The focus now is on the dilemmas of power since 2008. There is a brief biographical sketch of Vladimir Putin and much analysis of his ideas and policies, but the book now focuses on the systemic contradictions that have created a blockage on modernisation and a stalemate in politics, Putin's role as Prime Minister since 2008 and his political successes and failures, analysis of the implications of Putin's third term as President and the 2011-12 electoral cycle and the ensuing crisis which led to thousands protesting on the streets This work assesses the achievements and failing of Putin's rule, but above all tries to make sense of contemporary developments. This is the definitive account of Putin and is essential reading for all scholars and students of Russian politics.

Rough Draft Katy Tur 2022-06-14 INSTANT NEW YORK TIMES BESTSELLER "It's a hell of a story." —The New York Times "A stunning and revelatory memoir." —Oprah Daily From MSNBC anchor and New York Times bestselling author Katy Tur, a shocking and deeply personal memoir about a life spent chasing the

news. “By the time I was two years old, I knew to yell ‘Story! Story!’ at the squawks of my parents’ police scanner. By four, I could hold a microphone and babble my way through a kiddie news report. By the time I was in high school, though, my parents had lost it all. Their marriage. Their careers. Their reputations.” When a box from her mother showed up on Katy Tur’s doorstep, months into the pandemic and just as she learned she was pregnant with her second child, she didn’t know what to expect. The box contained thousands of hours of video—the work of her pioneering helicopter journalist parents. They grew rich and famous for their aerial coverage of Madonna and Sean Penn’s secret wedding, the Reginald Denny beating in the 1992 Los Angeles riots, and O.J. Simpson’s notorious run in the white Bronco. To Tur, these family videos were an inheritance of sorts, and a reminder of who she was before her own breakout success as a reporter. In *Rough Draft*, Tur writes about her eccentric and volatile California childhood, punctuated by forest fires, earthquakes, and police chases—all seen from a thousand feet in the air. She recounts her complicated relationship with a father who was magnetic, ambitious, and, at times, frightening. And she charts her own survival from local reporter to globe-trotting foreign correspondent, running from her past. Tur also opens up for the first time about her struggles with burnout and impostor syndrome, her stumbles in the anchor chair, and her relationship with CBS Mornings anchor Tony Dokoupil (who quite possibly had a crazier childhood than she did). Intimate and captivating, *Rough Draft* explores the gift and curse of family legacy, examines the roles and responsibilities of the news, and asks the question: To what extent do we each get to write our own story?

Mismatch Peter Gluckman 2008-02-14 We have built a world that no longer fits our bodies. Our genes - selected through our evolution - and the many processes by which our development is tuned within the womb, limit our capacity to adapt to the modern urban lifestyle. There is a mismatch. We are seeing the impact of this mismatch in the explosion of diabetes, heart disease and obesity. But it also has consequences in earlier puberty and old age. Bringing together the latest scientific research in evolutionary biology, development, medicine, anthropology and ecology, Peter Gluckman and Mark Hanson, both leading medical scientists, argue that many of our problems as modern-day humans can be understood in terms of this fundamental and growing mismatch. It is an insight that we ignore at our peril.

If you’re already a rare book hunter no further prelude is needed. If you have found this book through curiosity or happenstance, and it creates a spark within, I strongly encourage you to follow your own book hunting path. The rewards are great and the space concerns never-ending. Kurt Zimmerman is a highly regarded book collector and author. Written by Brad Schoenfeld, PhD, a leading authority on muscle hypertrophy, this text provides strength and conditioning professionals, personal trainers, sport scientists, researchers, and exercise science instructors with a definitive resource for information regarding muscle hypertrophy—the mechanism of its development, how the body structurally and hormonally changes when exposed to stress, ways to most effectively design training programs, and current nutrition guidelines for eliciting hypertrophic changes. The full-color book offers several features to make the content accessible to readers:

- Research Findings sidebars highlight the aspects of muscle hypertrophy currently being examined to encourage readers to re-evaluate their knowledge and ensure their training practices are up to date.
- Practical Applications sidebars outline how to apply the research conclusions for maximal hypertrophic development.
- Comprehensive subject and author indexes optimize the book's utility as a reference tool.
- An image bank containing most of the art, photos, and tables from the text allows instructors and presenters to easily teach the material outlined in the book. Although muscle hypertrophy can be attained through a range of training programs, this text allows readers to understand and apply the specific responses and mechanisms that promote optimal muscle hypertrophy in their athletes and clients. It explores how genetic background, age, sex, and other factors have been shown to mediate the hypertrophic response to exercise, affecting both the rate and the total gain in lean muscle mass. Sample programs in the text show how to design a three- or four-day-per-week undulating periodized program and a modified linear periodized program for maximizing muscular development. *Science and Development of Muscle Hypertrophy* is an invaluable resource for strength and conditioning professionals seeking to maximize hypertrophic gains and those searching for the most comprehensive, authoritative, and current research in the field.

Chinese Big Business in Indonesia Christian Chua 2008-03-25 The disintegration of Indonesia's New Order regime in 1998 and the fall of Soeharto put an end to the crude forms of centralised authoritarianism and economic protectionism that allowed large Chinese conglomerates to dominate Indonesia's private sector. Contrary to all expectations, most of the major capitalist groups, though damaged considerably by the Asian Crisis, managed to cope with the ensuing monumental political and economic changes, and now thrive again albeit within a new democratic environment. In this book Christian Chua assesses the state of capital before, during, and after the financial and political crisis of 1997/1998 and analyses the changing relationships between business and the state in Indonesia. Using a distinct perspective that combines cultural and structural approaches on Chinese big business with exclusive material derived from interviews with some of Indonesia's major business leaders, Chua identifies the strategies employed by tycoons to adapt their corporations to the post-authoritarian regime and provides a unique insight into how state-business relationships in Indonesia have evolved since the crisis. *Chinese Big Business in Indonesia* is the first major analysis of capital in Indonesia since the fall of Soeharto, and will be of interest to graduate students and scholars of political economy, political sociology, economics and business administration as well as to practitioners having to do with Southeast Asian business and politics.

A Course in Miracles Helen Schucman, PhD 2019-03-20 A Course in Miracles is the acclaimed spiritual guide that teaches the way to universal love and peace is by undoing guilt through forgiving others. The "miracles" of the title refers to shifts in perception from fear to love, which fosters the healing and sanctification of relationships. Although expressed in terms of traditional Christianity, this life-changing work constitutes nonsectarian, universal spiritual teachings. The three-part approach begins with an explanation of the course's theory and the development of the experience of forgiveness. The second consists of a workbook, comprising 365 lessons – an exercise for each day of the year – intended to influence students' perceptions. The third section presents a manual for teachers, in which the question-and-answer format provides responses for likely inquiries as well as definitions for terms used throughout the course. Written by Dr. Helen Schucman, a clinical and research psychologist, and edited by her colleague at Columbia University, Dr. William Thetford, from 1965 to 1970, A Course in Miracles has been translated into more than 20 languages and sold millions of copies around the world.

An Introduction to Neural Networks Kevin Gurney 2018-10-08 Though mathematical ideas underpin the study of neural networks, the author presents the fundamentals without the full mathematical apparatus. All aspects of the field are tackled, including artificial neurons as models of their real counterparts; the geometry of network action in pattern space; gradient descent methods, including back-propagation; associative memory and Hopfield nets; and self-organization and feature maps. The traditionally difficult topic of adaptive resonance theory is clarified within a hierarchical description of its operation. The book also includes several real-world examples to provide a concrete focus. This should enhance its appeal to those involved in the design, construction and management of networks in commercial environments and who wish to improve their

understanding of network simulator packages. As a comprehensive and highly accessible introduction to one of the most important topics in cognitive and computer science, this volume should interest a wide range of

readers, both students and professionals, in cognitive science, psychology, computer science and electrical engineering.
